

Best Display Maestro

Unlock all display resolutions Display Maestro gives you full control over attached displays allowing the usage of all available resolutions and bit depths This is done by ignoring the operating system setting of hiding potentially unsafe resolutions Restore legacy depth modes It is ideal for running legacy games which require color mode and do not automatically switch the screen depth for you Mac OS X Leopard removed the ability to set color mode manually using the builtin preferences pane but the feature is now available here in Display Maestro Lightweight and backgroundfriendly Display Maestro is a small application which can be configured to launch during login and sits quietly in the menu bar Upon exit it will also automatically revert your display back to the resolution chosen before it was launched
