

Full StaffCop Enterprise 40 discount

StaffCop Enterprise is an employee monitoring and corporate information security solution for corporations. It is created to work on workstations in a single company. StaffCop Enterprise captures and analyzes email, webmail, websites, website searches, social networks, chats, and messengers. It is a keylogger, records audio from the mic, webcam snapshots, network activity, all file operations, printed documents, block applications, block USB devices, block websites, black and white lists. StaffCop Enterprise is not just an ordinary monitoring and tracking solution; it is an all-in-one system that tracks working time, analyzes data loss threats, prevents security breaches, and allows to control employees remotely. Employee Time Tracking.

Get detailed records of your employees' work time. StaffCop Enterprise records start/end time of employees' business day, lunch breaks, coffee breaks, etc. This option enables you to maintain discipline among your staff at work, avoid delays during a business day, and improve the efficiency of your employees.

Insider Threat Detection – StaffCop Enterprise enables you to protect sensitive commercial information and information assets that may cause irreparable financial and reputational damages if it is leaked to third parties. **Identifying Loyalty Issues** – StaffCop Enterprise detects and logs instances when an employee visits job websites, sends out resumes, prints out confidential documents, copies sensitive information, and customer database on a USB drive or cloud services.

Investigation of information security incidents – StaffCop Enterprise provides powerful tools for investigation of incidents – relationship communications charts, migration file tracking, search by regular expressions and keywords, diagrams, and charts to identify anomalies.
